# Hygienic mask with rubber bands

They are used in clinics, hospitals and other medical conditions, and for general and daily purposes as needed. It is primarily used for medical and disease control purposes, as a physical barrier for microorganisms. If necessary, it can also be used as a protective mask in industrial processes or outdoors, for the protection of products and the environment.

*They are intended for medical staff in surgical procedures and daily practice, for patients and people at sites exposed to infection.*
